Vinnakota Phani Kumar

Cloud & DevOps Engineer | Backend Developer

phanivinnakota122@gmail.com | GitHub | LinkedIn

Portfolio | Andhra Pradesh, India

Professional Summary

Computer Science undergraduate specializing in Cloud Computing, DevOps, and Backend Engineering, with a strong foundation in AWS, Docker, Linux, CI/CD, and Infrastructure as Code. Skilled in developing backend applications and working with real-time systems, distributed workflows, and scalable architectures. Passionate about cloud infrastructure, deployment automation, system reliability, and building secure, efficient, and production-ready solutions. Eager to contribute to engineering teams while continuously growing through hands-on industry experience.

Education

B.Tech – Computer Science and Engineering *2024 – 2028*
Prasad V. Potluri Siddhartha Institute of Technology

Intermediate - MPC *2022 – 2024*
Narayana Junior College, Vuyyuru **90.7%**

Technical Skills

Programming Languages: Go, C++ ,Java , JavaScript , Python
Cloud & DevOps: AWS, Docker, Linux, CI/CD, Infrastructure as Code
Backend Development: Node.js, Express.js, REST APIs, Microservices
Databases: MySQL, MongoDB, Firebase, Redis
Tools & Platforms: Git, GitHub, Arduino, Android SDK
Additional Technologies: Next.js, React, Flutter, NLP, LLM Agents

Featured Projects

Bloodline – Emergency Blood Coordination Platform *Redis, Backend, Distributed Systems* [GitHub]

Built a real-time emergency blood coordination platform connecting hospitals, blood banks, and verified donors through geospatial proximity matching. Implemented atomic multi-unit slot claims using Redis Lua scripts, FEFO-based allocation, background workers, and automated replanning.

Syllabus-AI *TypeScript, AI, SaaS* [GitHub]

Developed an AI-powered SaaS platform that transforms syllabus data into personalized study plans, with real-time progress tracking and structured learning workflows.

Mentora *TypeScript, Java, Web Application* [GitHub]

Built a student–teacher platform supporting assignments, announcements, attendance, and progress tracking through centralized academic workflows.

Smart Hand Rehabilitation *Flutter, Arduino/ESP, IoT, Bluetooth* [GitHub]

Developed an IoT rehabilitation glove using flex/force sensors, vibration feedback, OLED output, and embedded telemetry; integrated Bluetooth-based real-time monitoring through a Flutter application.

Docviewer *TypeScript, OCR, File Processing* [GitHub]

Built a browser-based document processing platform supporting local file operations, document parsing, OCR, and conversions across DOC, PDF, PPT, and XLS formats.

GoodFind *React, Vite, TypeScript, Tailwind CSS* [GitHub]

Developed an e-commerce SaaS frontend using React 19, Zustand, and TanStack Query, with reusable UI components and structured client-side state management.

Public Transport Demand Prediction *MySQL, ETL, Data Warehousing* [GitHub]

Designed an ETL pipeline to clean and transform transportation datasets from APSRTC, Indian Railways, and domestic flights into a MySQL data warehouse using dimensional and star-schema modeling.

Hackathons & Awards

Yarin 24-Hour Hackathon – 2026 (Winner): Bloodline, an emergency blood coordination platform featuring geospatial matching, FEFO allocation, Redis-based atomic slot claims, and automated background processing.

Aptos Ecosystem Hackathon – 2025: Developed a decentralized oracle network in Move with provider staking and verified external data feeds.

SRM 36-Hour Hackathon – 2026: Built TruthLens AI, a real-time NLP/RoBERTa-based misinformation detection platform.

Innovation Club Model Presentation: Runner-up for Smart Hand Rehabilitation.

Certifications

AWS Academy – Cloud Foundations (2026)
Cisco – Python Essentials 1 & 2 (2025)
Udemy – Ethical Hacking Weaponization (2025)
Red Hat – Linux Administration (2026)
Udemy – JavaScript (2026)
Udemy – GUI Development Using Python (2025)
